

Northwind Solar Ltd. — Annual Report FY2025

Fictional sample document created for the DocLens demo. All names and figures are invented.

1. Chairman's Summary

FY2025 was a year of disciplined growth for Northwind Solar. Total revenue rose to INR 1,284 crore, an increase of 18% over FY2024, driven by rooftop installations for small businesses and a new utility-scale project in Rajasthan. Operating margin improved from 11.2% to 13.5% as panel costs fell and installation crews became more productive.

The Board recommends a dividend of INR 4.50 per share. Our priority for FY2026 is battery storage: we plan to invest INR 220 crore in a storage assembly line in Pune, expected to begin production in the third quarter of FY2026.

2. Operations

We commissioned 412 MW of new capacity during the year, compared with 338 MW in FY2024. The average installation time for a commercial rooftop system fell from 21 days to 16 days after we introduced pre-assembled mounting kits. Customer complaints per 1,000 installations fell to 3.1.

Our workforce grew to 2,960 employees, of whom 1,840 work in field installation and service. Lost-time injury frequency was 0.42 per million hours worked.

3. Risks

The principal risks are changes to net-metering rules in key states, delays in grid connection approvals, and exposure to imported cell prices. We hedge roughly 60% of expected cell purchases six months ahead.

4. Revenue by Region

The table below shows revenue and installed capacity by region for FY2025.

Region	Revenue (INR crore)	Capacity (MW)	Projects	Growth (%)
North	412	138	1,120	22
West	356	121	980	19
South	298	92	870	14
East	126	37	410	9
Central	92	24	260	11

5. Outlook

For FY2026 we expect revenue growth of 15-18%, with the storage business contributing from the fourth quarter. Capital expenditure is planned at INR 310 crore, including the Pune storage line.
